Enhancing access to European spatial data

EUROPEAN COMMISSION > INSPIRE > INSPIRE GEOPORTAL > Validator
INSPIRE Geoportal Metadata Validator [what's new](#) [change feed](#) [documentation](#) [about](#)

This validator replaces the former [schemasyntax validator](#) and implements the same validation criteria applied during the INSPIRE Geoportal discovery process.

It is possible to use this validator as a Web Service (instructions available [here](#)).

Paste your resource in the text field below
(ISO 19139 Metadata or OGC Service Endpoint or CSW GetRecords or GetRecordById GET Request or URL to metadata)

You can also upload a file to test
Select the file to be tested: No se ha seleccionado ningún archivo.

Test Resource For security reasons, HTTP resources using ports other than 80, 443 and 8080 cannot be contacted.
 Probe Network Services

DISCLAIMER: This service is used in the context of the INSPIRE Geoportal to perform validation of the metadata of resources discovered through the Member State Discovery Services. It is provided as is and it is not to be considered a full INSPIRE compliance test. While we have tried to ensure compliance with the INSPIRE Regulations and the relevant Technical Guidance documents we do recognise that there may still be issues that will need to be addressed. We would appreciate if you could [report to us](#) any issue you find with this validator so that we can improve it.

Start test Status

CASO DE ESTUDIO

Executable Test Suites

To start a Test Run, select one or multiple Test Suites with a click on the flip switches on the right-hand side (use) and press the "Start" button that appears once at least one Test Suite is selected. Please note that the Test Suites are only applicable to certain Test Object types and therefore not all Test Suites are combinable for a Test Run. Additional information about a Test Suite will be shown with a click on the plus button.

Documentación sobre metadatos

- Reglamento (CE) Nº 1205/2008 en lo que se refiere a los metadatos
 - Technical Guidances for the implementation of INSPIRE dataset and service metadata based on ISO/TS 19139:2007
- Reglamento (UE) Nº 1089/2010 en lo que se refiere a la interoperabilidad de los conjuntos y los servicios de datos espaciales
- Indicadores del seguimiento Inspire y las etiquetas de los ficheros de metadatos
- Guía Técnica para la implementación de servicios de visualización
- Guía Técnica para la implementación de servicios de descarga

Trabajo realizado

- Se han revisado ficheros de metadatos de los nodo IDE que forman parte de IDEE y como resultado se han detectado errores comunes

1) Validate XML documents

Messages

The dataset has 1 file(s) with errors for this assertion.

XML document '{B3763019-CF89-4D53-8505-198E340475CF}_100000_sp_a_v2.xml': The file has 318 schema validation error(s).

XML document '{B3763019-CF89-4D53-8505-198E340475CF}_100000_sp_a_v2.xml': 1:458: schema_reference.4: Failed to read schema document 'http://idec.icc.cat/schema/gmd/gmd.xsd', because 1) could not find the document; 2) the document could not be read; 3) the root element of the document is not <xsd:schema>.

2) Dataset geographic Bounding Box

Messages

The metadata record set has 1 record(s) with errors for this assertion.

XML document 'GLG_INTECMAR_CONFRARIAS_2006.xml', record 'GLG_INTECMAR_CONFRARIAS_2006': A dataset (series) metadata record must have a valid bounding box that defines the extent of the resource in geographic space. The bounding box is valid if: 1) it has four coordinates (given in decimal degree with a precision of at least 2 decimals), 2) both west- and east-bound longitude are greater than or equal to -180.00, and smaller than or equal to 180.00, 3) both south- and north-bound latitude are greater than or equal to -90.00, and smaller than or equal to 90.00, 4) south-bound latitude is smaller than or equal to north-bound latitude. At least one of these criteria is not fulfilled for one of the geographic bounding boxes of this metadata record. The provided values of this bounding box are: west-bound longitude = '-9.35', east-bound longitude = '-6.95', south-bound latitude = '41.8', north-bound latitude = '43.85'.

Hay que definir 2 decimales en la definición del ámbito geográfico, en la etiqueta
<gmd:EX_GeographicBoundingBox>

2) Dataset geographic Bounding Box

Correcto

```
<gmd:extent>
  <gmd:EX_Extent>
    <gmd:description gco:nilReason="missing"/>
    <gmd:geographicElement>
      <gmd:EX_GeographicBoundingBox>
        <gmd:westBoundLongitude>
          <gco:Decimal>-19.00</gco:Decimal>
        </gmd:westBoundLongitude>
        <gmd:eastBoundLongitude>
          <gco:Decimal>4.30</gco:Decimal>
        </gmd:eastBoundLongitude>
        <gmd:southBoundLatitude>
          <gco:Decimal>27.60</gco:Decimal>
        </gmd:southBoundLatitude>
        <gmd:northBoundLatitude>
          <gco:Decimal>44.60</gco:Decimal>
        </gmd:northBoundLatitude>
      </gmd:EX_GeographicBoundingBox>
    </gmd:geographicElement>
    <gmd:temporalElement gco:nilReason="missing"/>
    <gmd:verticalElement gco:nilReason="missing"/>
  </gmd:EX_Extent>
</gmd:extent>
```

3) Keywords in vocabulary grouped

Messages

The metadata record set has 1 record(s) with errors for this assertion.

XML document 'GLG_DXSP_USOS_20110220.xml', record 'GLG_DXSP_USOS_20110220': The keyword values originating from a single version of a single controlled vocabulary must be grouped in a single descriptiveKeywords element. For this metadata record, the following controlled vocabularies are referenced in more than one descriptiveKeywords element: GEMET, AGROVOC, INSPIRE_SpatialThemes

Las palabras claves que pertenecen a un mismo TESAURO tienen que estar incluidas dentro del mismo “<gmd:descriptiveKeywords>”

3) Keywords in vocabulary grouped

Correcto

```
<gmd:descriptiveKeywords>
  <gmd:MD_Keywords>
    <gmd:keyword>
      <gco:CharacterString>Ortoimágenes</gco:CharacterString>
    </gmd:keyword>
    <gmd:keyword>
      <gco:CharacterString>Uso del Suelo</gco:CharacterString>
    </gmd:keyword>
  </gmd:MD_Keywords>
  <gmd:MD_KeywordTypeCode codeList="./resources/codeList.xml#MD_KeywordTypeCode" codeListValue="theme">theme</gmd:MD_KeywordTypeCode>
</gmd:type>
<gmd:thesaurusName>
  <gmd:CI_Citation>
    <gmd:title>
      <gco:CharacterString>GEMET - INSPIRE themes, version 1.0</gco:CharacterString>
    </gmd:title>
    <gmd:date>
      <gmd:CI_Date>
        <gmd:date>
          <gco:Date>2008-06-01</gco:Date>

        <gmd:dateTime>
          <gmd:CI_DateTypeCode
            codeList="./resources/codeList.xml#CI_DateTypeCode" codeListValue="publication">publication</gmd:CI_DateTypeCode>
        </gmd:dateTime>
      </gmd:CI_Date>
    </gmd:date>
  </gmd:CI_Citation>
</gmd:thesaurusName>
</gmd:MD_Keywords>
</gmd:descriptiveKeywords>
```

4) Vocabulary information

Messages

The metadata record set has 1 record(s) with errors for this assertion.

XML document 'spacoruna_RT_PGM13_06ZONIF_2000.xml.xml', record 'spacoruna_RT_PGM13_06ZONIF_2000.xml': The metadata record has keywords which originate from a controlled vocabulary 'GEMET - INSPIRE themes, version 1.0', but no date of publication, creation, or revision is provided. The keywords are: Uso del suelo; Land use.

En la definición de las palabras clave del Tesauro “GEMET-INSPIRE themes, version 1.0” hay que incluir además de la palabra clave:

- Fecha del Tesauro: 2008-06-01
- Tipo de fecha: publication

4) Vocabulary information

Correcto

```
<gmd:thesaurusName>
    <gmd:CI_Citation>
        <gmd:title>
            <gco:CharacterString>GEMET - INSPIRE themes, version 1.0</gco:CharacterString>
        </gmd:title>
        <gmd:date>
            <gmd:CI_Date>
                <gmd:date>
                    <gco:Date>2008-06-01</gco:Date>
                </gmd:date>
                <gmd:dateType>
                    <gmd:CI_DateTypeCode
                        codeList=".//resources/codeList.xml#CI_DateTypeCode" codeListValue="publication">publication</gmd:CI_DateTypeCode>
                </gmd:dateType>
            </gmd:CI_Date>
        </gmd:date>
    </gmd:CI_Citation>
</gmd:thesaurusName>
```

5) Metadata Contact Role

Messages

The metadata record set has 1 record(s) with errors for this assertion.

XML document '{61B6F342-7667-4425-91C5-C694E321DD07}_100000_es_v2.xml', record '{61B6F342-7667-4425-91C5-C694E321DD07}_100000_es': The role information of the responsible party serving as metadata point of contact must have 'pointOfContact' as role (in gmd:CI_RoleCode/@codeListValue). The metadata record does not fulfill this requirement. Found: originator.

El valor del “role” del punto de contacto de los metadatos debe ser “poinOfContact”

5) Metadata Contact Role

Correcto

```
<gmd:contact>
    <gmd:CI_ResponsibleParty>
        <gmd:individualName gco:nilReason="missing"/>

6) Language metadata and dataset language

Messages

The metadata record set has 1 record(s) with errors for this assertion.

XML document '{61B6F342-7667-4425-91C5-C694E321DD07}_100000_es_v2.xml', record '{61B6F342-7667-4425-91C5-C694E321DD07}_100000_es': A metadata record must have one gmd:language property with a gmd:LanguageCode value. The metadata record does not fulfill this requirement.

Messages

The metadata record set has 1 record(s) with errors for this assertion.

XML document '{B3763019-CF89-4D53-8505-198E340475CF}_100000_spa_v2.xml', record '{B3763019-CF89-4D53-8505-198E340475CF}_100000_spa': A dataset (series) metadata record must have a gmd:Language code within its identification information. No gmd:LanguageCode is provided in this metadata record.

El esquema incluido para la definición del idioma no es correcto

6) Language metadata and resource language

Incorrecto

```
<gmd:language>
  <gco:CharacterString>spa</gco:CharacterString>
</gmd:language>

<gmd:language>
  <gmd:LanguageCode codeList="./resources/codeList.xml#LanguageCode" codeListValue="esp">esp</gmd:LanguageCode>
</gmd:language>
```

Correcto

```
<gmd:language>
  <gmd:LanguageCode codeList="./resources/codeList.xml#LanguageCode" codeListValue="spa">spa</gmd:LanguageCode>
</gmd:language>
```

7) Encoding (información de distribución)

Messages

The metadata record set has 1 record(s) with errors for this assertion.

XML document 'metadato90_spajEXTmexEXTREMADURABASE.xml', record 'spajEXTmexEXTREMADURABASE': Every metadata record must document the encoding in which the dataset is available and specify the name, version and specification of the encoding, but this record does not have the 'specification' property.

- Tenemos que incluir la información del formato de almacenamiento o distribución de los datos proporcionados usando el elemento “*gmd:distributionFormat/gmd:MD_Format*”
- Esta información es obligatoria y tiene una multiplicidad de 1..*
- Del formato estamos obligados a completar “nombre” y la “versión”.
 - no se puede incluir más de un nombre y una versión en estas etiquetas.
 - Si no se conoce la “versión” entonces:
 - No se completará contenido en la etiqueta “versión” y en el atributo “*gco:nilReason*” tomará el valor “desconocido” o “inaplicable”

7) Encoding (información de distribución)

```
<gmd:distributionFormat>
  <gmd:MD_Format>
    <gmd:name>
      <gco:CharacterString>Addresses GML Application Schema</gco:CharacterString>
    </gmd:name>
    <gmd:version>
      <gco:CharacterString>3.0</gco:CharacterString>
    </gmd:version>
    <gmd:specification>
      <gco:CharacterString>D2.8.I.5 Data Specification on Addresses - Technical
Guidelines</gco:CharacterString>
    </gmd:specification>
  </gmd:MD_Format>
</gmd:distributionFormat>
<gmd:distributionFormat>
  <gmd:MD_Format>
    <gmd:name>
      <gmx:Anchor xlink:href="http://inspire.ec.europa.eu/media-types/application/x-
shapefile">Esri Shapefile</gmx:Anchor>
    </gmd:name>
    <gmd:version gco:nilReason="unknown" />
  </gmd:MD_Format>
</gmd:distributionFormat>
```

7) Encoding (información de distribución)

OPCIÓN A) Dataset está disponible en un servicio WFS Inspire

- Cómo mínimo se tiene distribuir en “GML”

Correcto

```
<gmd:distributionFormat>
    <gmd:MD_Format>
        <gmd:name>
            <gco:CharacterString>Addresses GML Application Schema</gco:CharacterString>
        </gmd:name>
        <gmd:version>
            <gco:CharacterString>3.0</gco:CharacterString>
        </gmd:version>
        <gmd:specification>
            <gco:CharacterString>D2.8.1.5 Data Specification on Addresses – Technical Guidelines</gco:CharacterString>
        </gmd:specification>
    </gmd:MD_Format>
</gmd:distributionFormat>

<gmd:distributionFormat>
    <gmd:MD_Format>
        <gmd:name>
            <gco:CharacterString>Hydrography GML Application Schema</gco:CharacterString>
        </gmd:name>
        <gmd:version>
            <gco:CharacterString>3.0</gco:CharacterString>
        </gmd:version>
        <gmd:specification>
            <gco:CharacterString>D2.8.1.8 Data Specification on Hydrography – Technical Guidelines</gco:CharacterString>
        </gmd:specification>
    </gmd:MD_Format>
</gmd:distributionFormat>
```

7) Encoding (información de distribución)

OPCIÓN B) El Dataset no está disponible en un servicio WFS Inspire

- Se puede distribuir en diversos formatos: shape, dgn, GML

Habrá que poner en <specification> la URL correspondiente al formato, que la podréis encontrar en <http://inspire.ec.europa.eu/media-types/application>

Correcto

```
<?xml version="1.0" encoding="UTF-8"?>
<gmd:distributionFormat>
  <gmd:MD_Format>
    <gmd:name>
      <gco:CharacterString>SHP</gco:CharacterString>
    </gmd:name>
    <gmd:version>
      <gco:CharacterString>-</gco:CharacterString>
    </gmd:version>
    <gmd:specification>
      <gco:CharacterString>http://inspire.ec.europa.eu/media-types/application/x-shapefile</gco:CharacterString>
    </gmd:specification>
  </gmd:MD_Format>
</gmd:distributionFormat>
<gmd:distributionFormat>
  <gmd:MD_Format>
```

7) Encoding (información de distribución)

OPCIÓN B) El Dataset no está disponible en un servicio WFS Inspire

- Se puede distribuir en diversos formatos: shape, dgn, GML

Si el formato que tenéis no se encuentra en el listado, entonces se indicará “Desconocido” en la etiqueta `<gmd:specification>`

Correcto

10) Sistema de Referencia (SRS)

— md-iop.a.1: Coordinate Reference System

Verifies that the identifier(s) of the coordinate reference system(s) used in the data set have been created and published in the metadata for the data set.

Inspect the data set metadata whether metadata describing the coordinate reference system(s) have been created and published using the code property in RS_Identifier. Verify that the value is a http URI and includes one of the values from table 2 in TG_DS_TMPL.

Relevant requirement(s):

- IR Requirement Article 13(1): The metadata describing a spatial data set shall include the following metadata element required for interoperability: Coordinate Reference System - description of the coordinate reference system(s) used in the data set.
- TG Requirement 4: Metadata instance (XML) documents shall contain the element and meet the INSPIRE multiplicity specified in section 8.2.1.
- TG Requirement 5: The element specified in 8.2.1 shall be available in the specified ISO/TS 19139 path.

11) Reglamentos

LauraAlemany commented 5 days ago

The validator is not detecting the Title of the report, as it is analyzing the previous validator:

<http://inspire-geoportal.ec.europa.eu/validator2/>

You can write "Hello" in the title instead of "Reglamento (CE) no 1205/2008 de la Comisión de 3 de diciembre de 2008 por el que se ejecuta la Directiva 2007/2/CE del Parlamento Europeo y del Consejo en lo que se refiere a los metadatos" and there is no error in the Validator.

However in the previous validator if you don't write perfectly correct the text in the title, it generates an error.

Is it possible to implement this analysis?

Thank you.

Best Regards,
Laura Alemany

cportele commented 5 days ago

Owner

I assume this is about the metadata element "resource title". I think that this would require a change in both the Technical Guidelines and the Abstract Test Suite, before this can be implemented in the executable test suite.

Here is the test case that is:

[19115-19119/title](#)

However, as it is already not stated in the TG MD, I do not state any requirements regarding this.

Open questions

- There is no explicit Implementation Requirement in [TG MD](#) for the following tests:
 - [Check title](#)
 - [Check abstract](#)
 - [Responsible party role](#)

Should these be excluded or included in the ATS? Or added as requirements in the [TG MD](#)?

Proposed solution

1) Tesauros obligatorios

- Palabras clave:
 - GEMET - INSPIRE themes, version 1.0 (Tema)
 - ISO - 19119 geographic services taxonomy (Tipo de servicio)

Otras recomendaciones

Identificadores de ficheros

- No modificar los identificadores de los ficheros de metadatos si se realiza una actualización de los datos o del servicio
- Crear un nuevo identificador si los cambios en los datos o en el servicio generan un nuevo producto
- Es una buena práctica hacer coincidir el identificador del fichero de metadatos con el nombre del fichero XML

```
<gmd:fileIdentifier>
  <gco:CharacterString>spaignLLM2013</gco:CharacterString>
</gmd:fileIdentifier>
```

Miniaturas en metadatos

- Para tener una visualización más atractiva de la plantilla de metadatos se recomienda incluir “miniaturas” del conjunto de datos o servicios dentro de la etiqueta “gmd:graphicOverview”

```
</gmd:pointOfContact>
<gmd:graphicOverview>
  <gmd:MD_BrowseGraphic>
    <gmd:fileName>
      <gco:CharacterString>http://www.ign.es/resources/img/metadata/CNIG\_UA.jpg</gco:CharacterString>

+ Conformance class: Metadata for interoperability 1

Report generated by ETF

This test suite examines metadata records against the requirements for metadata in INSPIRE.

This is a draft version. It has limitations and is expected to contain errors. Please report any issues or problems [in GitHub](#).

Known limitations are documented in the description of the applicable test case or test assertion.

There is a general limitation in all assertions that polymorphism and containment by reference (see the [Technical Guidance](#), sub-clauses A.3, A.4 and A.5) are not supported. However, the current Abstract Test Suite does not support polymorphism and references either (all XPath expressions do not support polymorphism or references; in addition, schema validation is only executed against the ISO/OGC schemas without extensions). It is therefore unclear if this is really a limitation or if the sections in the technical guidance are outdated.

md-iso.a.1: Title

md-iso.a.2: Abstract

md-iso.a.3: Access and use conditions

md-iso.a.4: Public access

md-iso.a.5: Specification

md-iso.a.6: Language

md-iso.a.7: Metadata contact

md-iso.a.8: Metadata contact role

Conditions applying to access and use must be described at least once for the metadata resource.

The test checks if a useLimitation element is provided and it is not an empty characterstring.

If no conditions apply to the access and use of the resource, "no conditions apply" shall be used.

If conditions are unknown, "conditions unknown" shall be used.

Descriptions of terms and conditions, including where applicable, the corresponding fees shall be provided through this element or a link where these terms and conditions are described.

The basic test to detect missing or empty use limitation information is executed. If this basic check passes, the content needs to be checked manually for correctness.

Relevant requirement(s):

- TG MD Requirement 33: If no conditions apply to the access and use of the resource, 'no conditions apply' shall be used. If conditions are unknown, 'conditions unknown' shall be used.
- TG MD Requirement 34: Descriptions of terms and conditions, including where applicable, the corresponding fees shall be provided through this element or a link (URL) where these terms and conditions are described.

Hierarchy level

Dataset (series) tests 7

Execute tests that apply for all dataset / dataset series metadata records.

Status Passed, manual checks required
Duration 0.477 s

- ✓ md-iso.c.1: Dataset identification
- ✓ md-iso.c.2: Dataset language
- ✗ md-iso.c.3: Dataset linkage
- ✓ md-iso.c.4: Dataset conformity
- ✓ md-iso.c.5: Dataset topic
- ✗ md-iso.c.6: Dataset geographic Bounding box
- ✓ md-iso.c.7: Dataset lineage

This test checks each resource locator URL, if it is syntactically correct and if the resource it references can be accessed, in order to determine its type. If the referenced resource is recognized as a Network Service, it checks whether the linkage to the dataset is declared and implemented.

This test case only applies to records with a hierarchyLevel value 'dataset' or 'series'.

The test checks if a linkage is provided. If none is given, the test will complete successfully. If one or more are provided, for each linkage the test checks:

- if the linkage element contains an element of type gmd:URL.
- if the element content is a syntactically correct URL.
- if the referenced resource is accessible.
- if the response identifies the linkage as a known Harmonised Spatial Data Service type or a Network Service type, the test checks if appropriate linkage to dataset is available. The linkage is established via the Metadata URL for WMS, WFS, WCS, SOS and Atom based services. Otherwise a final manual test is suggested to the tester (to test if any of the linkages points to a webpage with further instructions or a client application that directly accesses the service).

Relevant requirements:

- TG Requirement 3: If a linkage for data is available, the Resource Locator shall be a valid URL providing one of the following: a link to a web page with further instructions, a link to a service capabilities document, a link to the service WSDL document (SOAP Binding), a link to a client application that directly accesses the service.

Source: [Abstract Test Case 'Dataset linkage'](#)

Status Passed, manual checks required

Duration 0.476 s

Messages

The metadata record set has 1 record(s) with errors for this assertion.

XML document 'spainLLM2013_v2.xml', record 'spainLLM2013': The metadata record has a linkage property, which references a resource with media type 'text/html;charset=UTF-8' at 'http://centrodedescargas.cnig.es/CentroDescargas/busquedaSerie.do?codSerie=LILIM#' which is not one of the media types indicating an INSPIRE network service. Please review the resource to check that it meets the linkage requirements; specifically, if the resource is a webpage, check that it provides further instructions or a client application that directly accesses the service.

This test checks if the metadata record has a valid geographic extent, expressed as a geographic bounding box with four coordinates (westBoundLongitude, eastBoundLongitude, southBoundLatitude, and northBoundLatitude). In addition, the bounding box shall be as small as possible. This requires a manual check.

This test case only applies to records with a hierarchyLevel value 'dataset' or 'series'.

The test checks if:

- a correctly formatted westBoundLongitude is given at gmd:westBoundLongitude/gco:Decimal
- the following constraint is fulfilled: $-180.00 \leq \text{westBoundLongitude} \leq 180.00$
- a correctly formatted eastBoundLongitude is given at gmd:eastBoundLongitude/gco:Decimal
- the following constraint is fulfilled: $-180.00 \leq \text{eastBoundLongitude} \leq 180.00$
- a correctly formatted southBoundLatitude is given at gmd:southBoundLatitude/gco:Decimal
- the following constraint is fulfilled: $-90.00 \leq \text{southBoundLatitude} \leq \text{northBoundLatitude}$
- a correctly formatted northBoundLatitude is given at gmd:northBoundLatitude/gco:Decimal
- the following constraint is fulfilled: $\text{southBoundLatitude} \leq \text{northBoundLatitude} \leq 90.00$

Relevant requirements:

- TG MD Requirement 20: The bounding box shall be as small as possible.
- TG MD Requirement 21: The bounding box shall be expressed in decimal degree with a precision of at least 2 decimals.

Conformance class: Metadata for interoperability

This test suite examines metadata records against the requirements for metadata for interoperability in INSPIRE.

This is a draft version. It has limitations and is expected to contain errors. Please report any issues or problems [in GitHub](#).

Known limitations are documented in the description of the applicable test case or test assertion.

Source: [Conformance class 'Metadata for interoperability'](#)

Pre-requisite conformance classes:

 md-iop.a.1: Coordinate Reference System

 md-iop.a.2: Temporal Reference System

 md-iop.a.3: Encoding

 md-iop.a.4: Topological Consistency

 md-iop.a.5: Character Encoding

 md-iop.a.6: Spatial Representation Type

md-iop.a.1: Coordinate Reference System

md-iop.a.2: Temporal Reference System

Verify whether the temporal reference system(s) used in the data set have been created and published in the metadata for the data set, if the spatial data set contains temporal information that does not refer to the default temporal reference system.

Inspect the spatial data set to determine whether it contains temporal information that does not refer to the Gregorian Calendar, the default temporal reference system.

If this is the case, inspect the data set metadata whether metadata describing the temporal reference system(s) has been created and published using the code property in RS_Identifier (XPath: gmd:referenceSystemInfo/gmd:MD_ReferenceSystem/gmd:referenceSystemIdentifier/gmd:RS_Identifier/gmd:code/gco:CharacterString).

Note that currently no guidance exists regarding the identifiers for temporal reference systems.

Relevant requirement(s):

- IR Requirement Article 13(2): The metadata describing a spatial data set shall include the following metadata element required for interoperability: Temporal Reference System: Description of the temporal reference system(s) used in the data set. This element is mandatory only if the spatial data set contains temporal information that does not refer to the default temporal reference system.
- TG Requirement 4: Metadata instance (XML) documents shall contain the element and meet the INSPIRE multiplicity specified in section 8.2.2.
- TG Requirement 5: The element specified in 8.2.2 shall be available in the specified ISO/TS 19139 path.

Status Passed, manual checks required

Duration 0.001 s

md-iop.a.4: Topological Consistency

Verify whether metadata about the topological consistency of the data set has been created and published in the metadata for the data set, if the spatial data set includes types from the Generic Network Model and does not assure centreline topology (connectivity of centrelines) for the network.

Inspect the spatial data set to determine whether it includes instances of types from the Generic Network Model and does not assure centreline topology (connectivity of centrelines) for the network.

If this is the case, inspect the data set metadata whether metadata describing the topological consistency has been created and published in TopologicalConsistency for the data quality measures specified for the theme(s) in the section "Logical Consistency – Topological consistency" in clause 7 of the Technical Guidance (XPath: gmd:dataQualityInfo/gmd:DQ_DataQuality/gmd:report/DQ_TopologicalConsistency/result /DQ_QuantitativeResult/value).

Relevant requirement(s):

- IR Requirement Article 13(4): The metadata describing a spatial data set shall include the following metadata element required for interoperability: Topological Consistency: Correctness of the explicitly encoded topological characteristics of the data set as described by the scope. This element is mandatory only if the data set includes types from the Generic Network Model and does not assure centreline topology (connectivity of centrelines) for the network.
- TG Requirement 4: Metadata instance (XML) documents shall contain the element and meet the INSPIRE multiplicity specified in section 8.2.6.
- TG Requirement 5: The element specified in 8.2.6 shall be available in the specified ISO/TS 19139 path.

This test suite examines metadata records against the requirements for metadata in INSPIRE.

This is a draft version. It has limitations and is expected to contain errors. Please report any issues or problems [in GitHub](#).

Known limitations are documented in the description of the applicable test case or test assertion.

There is a general limitation in all assertions that polymorphism and containment by reference (see the [Technical Guidance](#), sub-clauses A.3, A.4 and A.5) are not supported. However, the current Abstract Test Suite does not support polymorphism and references either (all XPath expressions do not support polymorphism or references; in addition, schema validation is only executed against the ISO/OGC schemas without extensions). It is therefore unclear if this is really a limitation or if the sections in the technical guidance are outdated.

md-iso.a.3: Access and use conditions

Conditions applying to access and use must be described at least once for the metadata resource.

The test checks if a useLimitation element is provided and it is not an empty characterstring.

If no conditions apply to the access and use of the resource, "no conditions apply" shall be used.

If conditions are unknown, "conditions unknown" shall be used.

Descriptions of terms and conditions, including where applicable, the corresponding fees shall be provided through this element or a link where these terms and conditions are described.

The basic test to detect missing or empty use limitation information is executed. If this basic check passes, the content needs to be checked manually for correctness.

Relevant requirement(s):

- TG MD Requirement 33: If no conditions apply to the access and use of the resource, 'no conditions apply' shall be used. If conditions are unknown, 'conditions unknown' shall be used.
- TG MD Requirement 34: Descriptions of terms and conditions, including where applicable, the corresponding fees shall be provided through this element or a link (URL) where these terms and conditions are described.

Messages

XML document 'spaignwms_unidades_administrativas_2013.xml', record 'spaignwms_unidades_administrativas_2013': Check the use limitation information included in this record. Verify that if no conditions apply to the access and use of the resource, "no conditions apply" has been used. If the conditions are unknown, verify that "conditions unknown" has been used. Also verify that the descriptions of the terms and conditions (including the fees, where applicable) have been provided either directly in the use limitation text or through a link where these terms and conditions are described. The use limitation text is: No hay limitaciones
